

A Black-Hole's Diet

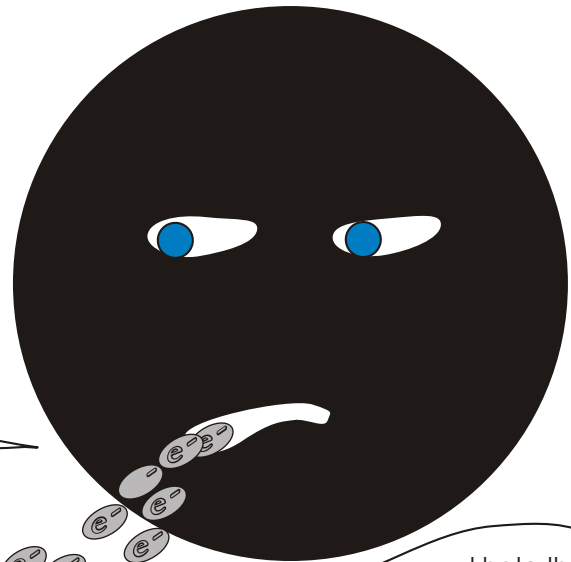

YUM YUM!!

I just love those protons and neutrons!

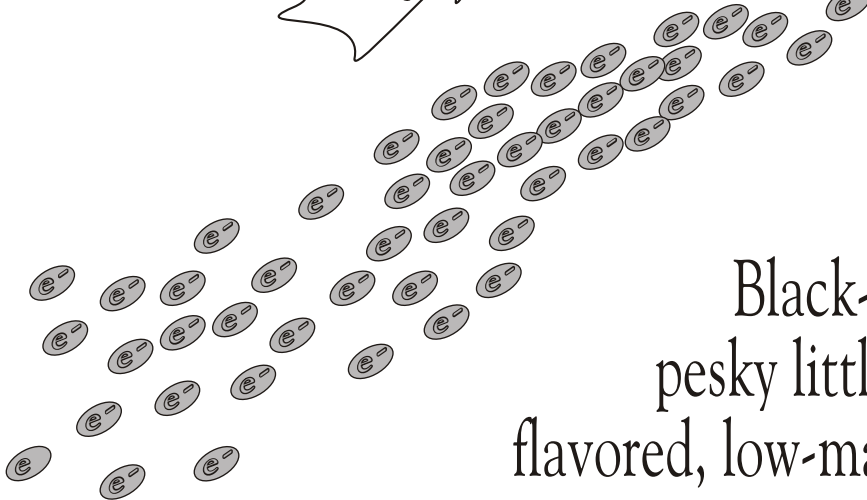

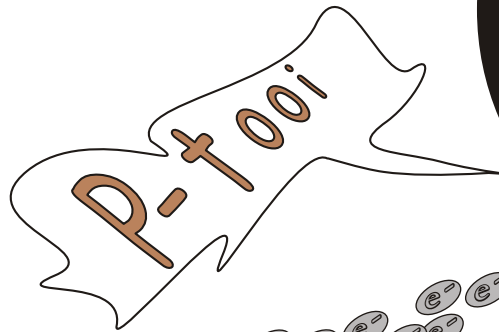

A Black-Hole Loves Eating the Heavy Matter from the Atomic Nucleus.

Those spicy electrons slow the Black-Hole's gluttonous appetite. This forces some moderation it's rate of gulping down large masses.

I hate the taste of electrons. They just don't have that heavy mass flavor I enjoy.

However, all C-R Black-Holes spit out those pesky little **HOT, HOT, HOT** flavored, low-mass tasting electrons.
